

## Your objectives

To measure, control and communicate credibly your EcoPerformance in an easy, user friendly and continuous way. To hold control over your material- and energy-flows - economically and professionally.

## Our Solution

One of the best selling and since its market launch in 1993 continuously enhanced software for analyses and the controlling of Corporate EcoPerformance, which has been awarded repeatedly.

## REGIS enables you to

- ✓ measure and evaluate your EcoPerformance
- ✓ acquire economical and ecological facts
- ✓ establish fundamentals for decisions and for your communication
- ✓ retain know how independent from persons
- ✓ use most up to date methods and datasets
- ✓ gain more benefit from already collected data
- ✓ install a corporationwide environmental reporting
- ✓ consolidate units, branches, country organisations

## Everything under control!

Anyone attempting to improve the eco-efficiency of his company will recognise the problem: how can operational environmental performance be presented as concrete set targets, with quantities as clearly specified as possible, so that it can be both planned and controlled?

To perform this tasks in a efficient, economically and ecologically meaningful way, REGIS was developed more than 12 years ago and was at that time the first software for the measuring and controlling of corporate eco-performance world-wide.

With REGIS you are enabled to record input and output data in a predefined, company oriented system customized for your needs along with administrating the material and energy flows. The environmental aspects are easy, fast and comprehensible identified due to integrated management ratios and standard evaluation methods like Ecoindicator, CML or Ecological Scarcity. You obtain a corporate eco-balance with a lot of additional information, which allows to benchmark scenarios, processes, units or sites. That supports you in optimising your environmental program according to economical and ecological criteria.

This is how REGIS provides your management with the needed basis for the decision process. With REGIS your eco-performance and improvement process is securely under control, without to have professionals in eco-balance employed.

## A variety of companies which already make use of REGIS

Swisscom - Coca Cola Beverages  
 Canon Europe - Swiss Re  
 armasuisse (Swiss Federal Government)  
 EMPA - Hilti Corp. - Komatsu  
 Krupp Presta - and many more

### Basis for communication

You benefit from the use of REGIS and its management oriented data aggregation additionally, because you will be enabled to enhance the motivation within your business and boost your power of persuasion using significant facts and figures. Either employees, investors, customers or the public, with the use of REGIS you can prove and communicate your engagement.

### Ecoinvent / The dataset

The actual eco-balancing process takes place in the basic database. Any materials required (goods, substances and energy types) may be added to the provided data from ecoinvent which already contains over 2500 entries.

The ecoinvent dataset provides harmonized, generic and quality controlled ecoinventories for many subjects like energy, transport, waste treatment, chemicals and more. The basic version of REGIS already contains a full licence of the ecoinvent database and the built in interface allows you to import further data from ecoinvent anytime.

### more than software

As a solution provider and professional partner for sustainability- and environmental management we support also the implementation of REGIS and the building up of corporate models and datasets.

The clear separation of the company modelling process from the administration of the related material and energy flows makes the design of corporate structures easy and effective. A company is structured in graphical terms as organisational units such as departments, sites, cost centers, etc. and predefined measuring points are allocated to the respective units. This system builds the basis for recording quantities and costs for the period set. Anyone working with the huge standard data provided by REGIS can now move directly on to the analysis stage. Various standard analyses - such as input-output analysis, system analysis and the production of central benchmarks are prepared. REGIS also allows to define your own specific evaluation method. A unique facility is provided to view data under application of a number of system boundaries. This provides you with a particularly high degree of practical access to your results.

REGIS has his regularly updates and was developed in accordance to the ISO Standards (14001/14031 /14040) along with the method for corporate eco-balances of the Swiss Association for Environmentally Conscious Management.

REGIS secures your Investment: Unlike self developed application within REGIS all created models and analyses are independent from personal know how and are supported by our experts from sinum.

### REGIS and corporate structures

With the new generation of REGIS corporate structures and data consolidation of organisational units is available as an add on. Either you would like to evaluate country organisations, sites or branches, the REGIS consolidation allows you to define your specific system. An ideal support for the corporation-wide controlling.
